

Eagle Eye Self Install Kits

From Pigeon Control Services (021) 447 3578
pigeoncontrol@telkomsa.net

For those who would prefer to install their Eagle Eye bird deterrents themselves or utilize their local TV aerial installer or electrician we offer the Self Install Kit. Normally at least two units are required for an effective system.

The self install kit consists of the following items which would be required to perform a standard Eagle Eye installation:

- 1 Eagle Eye unit complete with built in motor
 - 1 Solar Panel or a Mains power supply (please specify)
 - 1 Flat or Corner Bracket (please specify)
 - 1 Aluminum straight pipe 300mm long
 - 1 Fastener pack (stainless steel screws and wall plugs)
 - 1 Power cable 10 metres long for 12 volts)
- Optional double bracing hardware is available for high wind areas

Free online support is included.

***Maintenance**

The Eagle Eye unit is covered with layers of reflective material to produce a spectrum that birds see as danger. This surface is NOT chrome and will get dirty. It is recommended that the Eagle Eye unit be cleaned with a special surface cleaner available from us and serviced every at least every 6 months. Normal dishwashing liquid must NOT be used as it will remove the reflective surface. The manufacture gives an 18 month carry in warranty on the motor of the Eagle Eye but only if it has been installed exactly as detailed in their free step by step, fully illustrated installation guide (included).

Request our "Placement Guide" for further information on determining best mounting locations on buildings and determining quantities required.
