

# EAGLE EYE PRO-PELLER BIRD DIY KIT

From Pigeon Control Services cc. Tel: 021 447 3578. Email: pigeoncontrol@telkomsa.net

The Pro-Peller was designed to provide a durable, yet cost effective, reflective unit used to compliment the Eagle Eye Deterrent system.

The unit rotates by means of its double bearing system and the wings have been designed to rotate in the slightest of breezes.

The unit is totally wind-driven and no electricity is needed. This ensures a low cost, low maintenance and easy to install open-area bird deterring device.

The wings are made out of aluminium to ensure durability.

The unit should be cleaned occasionally to ensure optimal reflections and product longevity. Only use Eagle Eye Surface Cleaner on this product.

The units are available in silver and gold colour for land birds and red and gold colour for sea birds. Mounting brackets come in either flat for mounting on a flat surface or corner brackets for mounting on the top of a pitched roof. Specify colour of unit for specific bird and bracket type required when ordering.

Placement:

One Pro-Peller unit has an effective radius of 15m (50ft).

Place one unit every 30m (100ft) in large open areas.

Always place the units in direct sunlight and in areas with a light breeze.
