

Stainless Steel Bird Spikes

www.pigeoncontrol.co.za Tel: 021 447 3578

Overview

Stainless Steel Bird Spikes are used to deter unwanted birds from specific roosting areas. Ideal for window sills, parapet walls, chimneys, roof peaks, air-conditioning units, solar panels and many more applications.

Technical

The spikes are manufactured from grade 302 stainless steel to ensure longevity when used outside - even in coastal areas. The base is manufactured out of ultra violet resistant polycarbonate and is designed to snap off where needed.

The length of the bird spike is 500mm and the width can be modified to up to 200mm by bending the spikes.

The spikes are 1mm thick and very hard to see when installed in order not to detract from the building aesthetics.

Installation

The bird spikes can be fastened to the surface with a strong adhesive or by means of screws or cable ties.

Comes in 500mm lengths and sold by the metre.
